

NOW! OIL-FIRING COMES TO AGA COOKING!

AN AUTOMATED AGA. The dream of every housewife, who likes her cooking to be one-up on her neighbours and her water always piping hot. Now this has come true. Joints miraculously succulent—unshrunk—never dried up. Baking in a class by itself. Hot plates and ovens ready for action 24 hours a day to give her a reputation for cooking no other cooker could possibly give her. Yet absolutely nothing to do—not

even a dial to set. How's it done? This new AGA is *oil-fired*. The cooking stays just as perfect because the inimitable AGA heat storage method remains the same. This method stores heat inside a thick insulating jacket, controls it automatically and pipes it in just the right quantities to ovens and hot plates so that none is wasted. At the same time it uses some of the heat to provide hot water. Which means very low running costs.

An AGA
needs only one control
for perfect cooking
and hot water...

And you need never touch it!
